

Simple, reliable data protection for your mission critical M365 data

Email and documents are critical components of a business' livelihood that contain intellectual property, legal documents, customer information, transaction records, auditable internal and external communications, and more. Losing this data can result in operational disruptions, legal penalty and tarnished reputations that can have a significant financial impact on the business.

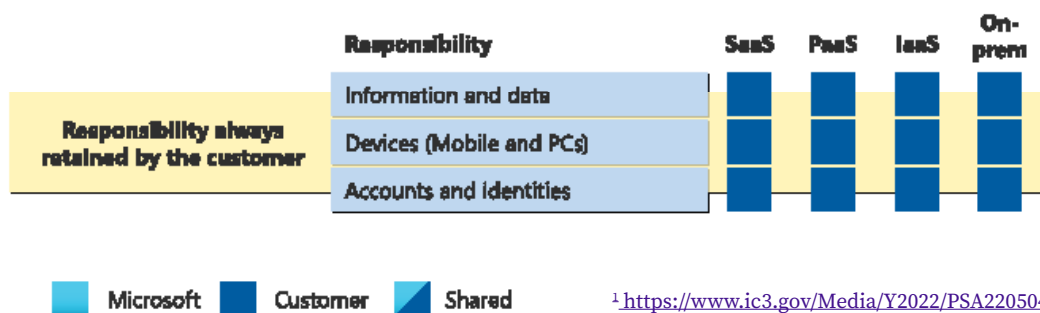

The FBI estimates that \$43 Billion has been stolen through business email compromise since 2016.

Why protect Microsoft 365?

Cloud Security is a Shared Responsibility

Microsoft is responsible for the security of many of the things they sell to customers. Unfortunately, this responsibility does not apply to the customer's information and data.

- Microsoft's shared responsibility model clearly puts protecting data on the customer's shoulders.
- Within Section 6.b of Microsoft's Service Agreement, they outline responsibility for data loss, clearly indicating that they are not liable for any loss, and recommend customers regularly backup your content and data.

Microsoft Office is one of the Most Targeted Platforms for Malware Attacks

Backing up your Microsoft 365 environment won't prevent an attack, but it will ensure that you are able to recover quickly and minimize the business impact in the event of an attack.

Key Features

HYCU provides simple, reliable data protection for your mission critical M365 data that meets the requirements of today's modern businesses. With HYCU Protégé for Microsoft 365, you can protect Exchange, SharePoint, OneDrive and Teams data with:

Fully managed Backup-as-a-Service

You chose SaaS when you deployed Microsoft 365 to avoid the ongoing hassle of management and maintenance that comes with legacy software solutions. Your backup solution should be just as easy to deploy as the application it is protecting.

Advanced search through Outlook, OneDrive and Sharepoint

Avoid searching for a needle in a haystack with advanced search options that help you quickly and easily locate files within your backup.

e-Discovery and Compliance

HYCU Protégé for Microsoft365 supports GDPR compliance and Legal holds, storing audit-ready backups that can be used in the event of litigation or to uncover the activity of bad actors within the company.

Continuous email backup

Company emails are documented conversations that often contain confidential, business critical data and information. Protect emails the moment they are sent and minimize the risk of data loss with continuous email backup.

Immutable, Application-consistent backups

Application consistent backups that cannot be modified once created. Ensures that your M365 environment can be restored without any errors or data inconsistencies.

Agentless and Impact-free

Impact-free backups and granular recovery without the hassle of agents or plugins

Purpose built

To address the unique challenges of data protection for M365
