HYCU R-Cloud™
Backup and Recovery for Microsoft 365

Challenges with Microsoft 365 protection today

- → **Vendor-locked storage model** where sensitive Microsoft 365 data sits on the backup vendor's cloud
- → **Lack of true ransomware defence** with immutability at a software level instead of storage level
- → **Fragmented backup management** across multiple workloads with point solutions
- → **Limited control over RPOs** with solutions offering a 'one policy for all' approach
- → **Limited data deduplication and compression capabilities** to minimize storage costs and needs

The flexibility, performance, and control you need for your Microsoft 365 backups

Experience enterprise-grade protection that builds operational resilience and shields your business from prolonged disruptions.

Complete freedom and control over backup storage
Store backups on a public cloud storage target that only you own and control, and meet your data residency and sovereignty needs. Choose from AWS S3, Azure Blob Storage, Google Cloud Storage, Dell Data Domain on Public Cloud or other S3-compatible targets.

True ransomware protection with Object Lock immutability
Protect your critical Microsoft 365 backup data from ransomware and insider threats using Object Lock immutability. With HYCU, you always have a secure, tamper-proof copy that you can safely recover from.

Comprehensive protection for over 80 workloads from a single solution
In addition to key Microsoft 365 services, manage backup and recovery for 80+ workloads across on-prem, hybrid cloud, and SaaS apps from a single pane of glass. Consolidate and simplify your backup management with HYCU.

Microsoft 365 Protection on HYCU R-Cloud™

Eliminate the risk of losing access and control over your critical Microsoft 365 data.

Your mission-critical data, always safe and accessible

With HYCU, you won't have to worry about your Microsoft 365 data ever again. From automated, policy-driven backups to instant, one-click recovery, we've got you covered.

Total control over data

Store off-site backups in a desired region on a storage target you own and control, meeting your residency and sovereignty needs.

Safe, ransomware-proof copies

Recover your data confidently with immutable ransomware-proof copies locked using Object Lock.

Backup storage efficiency

Combine synthetic full backups with the option to use DD Boost and DDVE to minimize your storage and egress costs.

Always encrypted

Encrypted in transit and at rest with vaulting and immutability.

Stress-free monitoring

Stay on top of your backups with real-time notifications, reporting, and 24/7 logging.

One-click granular recovery

Restore or export in bulk or just individual emails, files, sites, calendars, chats, folders, and more.

Automated, policy-driven backups

Automate your backups with fully customizable 'set and forget' backup policies that run 24/7.

Advanced data search

Find the data you need by searching through emails, files, and sites with an extensive list of filters and criteria.

Flexible retention for compliance

Protect only the workloads you need and tailor your retention for each – without any limits.

### Beyond Microsoft 365

Also protect Microsoft Entra ID, Azure Stack HCI, Azure VMs, Azure Blob Storage, Azure SQL, and GitHub.
