# HYCU Legal 360:
## Matter Resilience for the Modern Law Firm

Purpose-built data protection for law firms so matters stay resilient through disruption

HYCU Legal 360 is a legal data protection solution designed to help law firms keep matters moving when an outage, an incident, or a ransomware event hits.

Legal 360 protects iManage Cloud and extends coverage across the broader matter footprint spanning 100 workloads including Microsoft 365, Microsoft Entra ID, file shares, compute, cloud infrastructure, and SaaS apps.

Built for operational recovery, not just point backups, Legal 360 enables fast, simple restoration whether you need one file, a full workspace, or the collaboration and identity services attorneys rely on every day.

## The Challenge: Matter Data Lives Everywhere

**Modern legal work is distributed.** Even when iManage is the system of record, active matter work spreads across:

- Email, Teams chat, SharePoint sites, OneDrive folders
- Identity and access controls, including Entra ID and SSO
- File shares and hybrid infrastructure
- Cloud platforms and specialized SaaS tools

→

**That distributed footprint increases exposure to:**

- Accidental deletions and overwrites
- Ransomware and destructive attacks
- Insider risk and malicious changes
- Misconfigurations and failed scripts or integrations
- SaaS outages and tenant-level incidents

A disruption in any layer can stop a matter, and no vendor protects the entire matter lifecycle.

## What Legal 360 Delivers

✓ **Business Continuity.** Continuous access during service outages and disruptions.

✓ **Compliance Ready.** Sovereignty, retention and audit-friendly recovery.

✓ **AI-Safe Posture.** Improved AI readiness with comprehensive data protection.

✓ **Ransomware Containment.** Immutable backups for clean recovery.

✓ **Unified Management.** One console for your entire tech stack.

## Legal 360 **Coverage**

### End to End Matter Resilience

→ Documents

→ Identity

→ Collaboration

→ Compute, Databases, File Shares, Data Repositories

→ All SaaS

And many more...

# Key Capabilities

## Unified management and visibility

- Manage protection and recovery from a single console across the matter footprint.
- Use reporting and audit-friendly controls to support operational governance.

## Granular and bulk recovery

- Recover an individual item or configuration, or the entire tenant based on what the incident requires.
- Recover versions, metadata, and permissions so restores are immediately usable.

## Data protection on autopilot

- Automate protection with continuous policies tailored for each workload, matter, or user.
- Reduce overhead by eliminating manual exports and brittle scripts.

## Faster recovery across the full workflow

- Restore critical matter services across collaboration, identity, and content systems to resume work fast.
- Recover dependencies and configurations alongside data to prevent broken access and delays.

## Immutable, customer-owned backups

- Store immutable, off-site backup copies in firm-owned storage, including S3-compatible targets.
- Isolate backup access from production admins to strengthen ransomware resilience.
