

Years of Simple, Secure and Unified Data Protection with HYCU

Education

Australia

[Chevalier College](#) is a well-established Catholic co-educational secondary school in the Southern Highlands of New South Wales. Serving students, teaching staff and the wider school community, the ICT environment supports learning, administration, communication and an increasing number of cloud-based services. Reliability, ease of use and consistent data protection across platforms are essential.

When recovering from an application issue, we no longer need to reinstall the application or operating system. Instead, we are able to restore the entire VM image from a previous backup, significantly reducing recovery time. What previously required hours of effort can now be completed much more efficiently.

HYCU Solution

HYCU R-Cloud™
for Nutanix →

HYCU R-Cloud™
for Microsoft 365 →

Challenge

When Chevalier College initially engaged Qirx in 2018, their environment was based on a legacy hypervisor and SAN architecture. The IT leadership recognised that:

- They needed a backup solution that tightly integrated with their evolving platform (namely Nutanix AHV) and could simplify management for a small IT team.
- Over time, as cloud workloads grew (including Microsoft 365 and other SaaS/collaboration services), there was a recognition that on-premises protection alone would no longer suffice - they needed unified coverage across on-premises and cloud data.
- They needed a partner that could not only solve their immediate on-premises backup challenge, but grow with them into broader data-protection domains.

Solution

Chevalier first adopted HYCU in 2018 to protect its Nutanix AHV environment. Deployment was completed in under an hour, with HYCU immediately removing complexity from day-to-day data protection. HYCU now protects Chevalier's full range of on-premises workloads – covering Windows applications, SQL databases, web services and terminal servers – and has since been expanded to safeguard cloud workloads, including Microsoft 365. This provides Chevalier with a unified approach to protecting mail, files and collaboration tools.

A key advantage for Chevalier is the continued simplicity of HYCU's design. The Nutanix-native interface, policy-driven operations and predictable recovery processes ensure data protection remains straightforward and efficient as the school expands its use of cloud services.

Why it works

HYCU aligns with Chevalier's need for a straightforward, reliable and scalable data-protection platform. The solution integrates natively with Nutanix, offers clear and predictable recovery, and extends the same simplicity to cloud workloads such as Microsoft 365. Because HYCU provides one consistent method for managing on-premises and cloud data, Chevalier avoids fragmented tools and reduces operational overhead. The long-standing relationship since 2018 reflects a solution that continues to meet Chevalier's evolving requirements.

Restoring Office 365 entities has become an incredibly straightforward process. What previously might have involved complicated steps or lengthy downtime can now be accomplished with ease, allowing us to efficiently recover important files, emails, and collaboration tools whenever needed.

Chevalier College

HYCU is a market leader and one of the fastest-growing providers of multi-cloud and SaaS data protection as a service. Purpose-built to deliver true SaaS-based backup and recovery across on-premises, cloud-native, and SaaS environments, HYCU enables organizations worldwide to protect, migrate, and recover their data with confidence, while strengthening resilience against ransomware and data loss. Venture backed and headquartered in Boston, Massachusetts, HYCU continues to set the standard for modern, SaaS-first data protection.

HYCU's award-winning R-Cloud™ platform eliminates the complexity, risk, and cost associated with legacy data protection solutions, delivering a unified and intuitive approach to SaaS data protection. Recognized for its innovation and customer impact, HYCU was recently named a [Leader in SaaS Data Protection by IDC](#) in the IDC MarketScape SaaS Data Protection Report, 2025–26.
