

HYCU Legal 360: Matter Resilience for the Modern Law Firm

Protection and continuous access for
the systems law firms run matters on

HYCU Legal 360 is a data protection offering designed to help law firms keep matters moving through incidents, cloud outages, or even a ransomware attacks.

Legal 360 offers protection for iManage Cloud and extends coverage across the broader matter footprint, spanning 100+ workloads including Microsoft 365, Microsoft Entra ID, file shares, compute, cloud infrastructure, and other SaaS apps.

Built for operational recovery rather than point backups, firms on Legal 360 get fast, simple recovery from HYCU R-Cloud, whether that is a document in iManage, a SharePoint site or mailbox, or the identity and access controls underneath them. R-Serve adds continuous access to iManage data when the primary path is not available.

The Challenge: Matter Data Lives Everywhere

Modern legal work is distributed. Even when iManage is the system of record, active matter work spreads across:

- Email, Teams chat, SharePoint sites, OneDrive folders
- Identity and access controls, including Entra ID and SSO
- File shares and hybrid infrastructure
- Cloud platforms and specialized SaaS tools

That distributed footprint increases exposure to:

- Accidental deletions and overwrites
- Ransomware and destructive attacks
- Insider risk and malicious changes
- Misconfigurations and failed scripts or integrations
- SaaS outages and tenant-level incidents

A disruption in any layer can stop a matter, and no backup vendor protects the entire matter lifecycle.

What Legal 360 Delivers

- ✓ **Control and Recovery.** Backups in the firm's own storage, recovered on the firm's terms.
- ✓ **Business Continuity.** Continuous access to iManage data through HYCU R-Serve.
- ✓ **Compliance Ready.** Sovereignty, retention and audit-friendly recovery.
- ✓ **AI-Safe Posture.** Improved AI readiness with comprehensive data protection.
- ✓ **Ransomware Containment.** Immutable backups for clean recovery.
- ✓ **Unified Management.** One console to protect your matter footprint.

Legal 360 Coverage

Resilience
Across
the Matter
Footprint

→ Documents

→ Identity

→ Collaboration

→ Compute, Databases, File Shares, Data Repositories

→ All SaaS

And many more...

Key Capabilities

Recovery and continuous access

- Recover critical matter data across collaboration, identity, and content systems to resume work quickly.
- Keep users working through a service disruption with always-on access to iManage data, through HYCU R-Serve.

Data protection on autopilot

- Automate protection with continuous policies tailored for each workload, library, or user.
- Reduce overhead by eliminating manual exports and risky scripts.

Granular and bulk recovery

- Recover an individual item or configuration, or the entire tenant, based on what the incident requires.
- Restore directly back to the source system, or export a copy to storage the firm owns.

Immutable, customer-owned backups

- Keep backups in storage the firm owns and controls to meet data residency and sovereignty requirements.
- Store immutable, WORM-enabled copies so you always have a clean recovery point to recover from.

Unified management and visibility

- Manage protection and recovery from a single console across the matter footprint.
- Use reporting and audit-friendly controls to support operational governance.
