

HYCU Backup as a Service for Google Cloud Platform (GCP)

The Only Purpose-built, fully-managed Backup as a Service for GCP

HYCU for Google Cloud Platform is the industry's first and only purpose-built, cloud-native, backup and recovery service built ground up with the Google Cloud administrator in mind. There's no need:

- To deploy or manage the data protection infrastructure
- For day to day management – just choose the VM and Apps you want to protect and assign the backup policy you desire
- For agents or additional scripts

HYCU takes it from there! HYCU is a service that you subscribe to on GCP Marketplace, there is no install, setup or upgrades involved and the backups are impact-free.

Five Reasons Why You Need HYCU Backup as a Service for GCP

Built with your goals in mind – with a set of backup policies built in, you don't need to create or set your own. Just choose how often to backup and how long to retain, and let HYCU for GCP do the rest.

Easy recovery – Recoverability is the most critical aspect of any backup software. HYCU makes it simple, intuitive, and fast. To recover, all you need to do is select the VM or App, select the point in time you desire and perform the recovery. You can recover the whole machine, individual disks or specific files or folders.

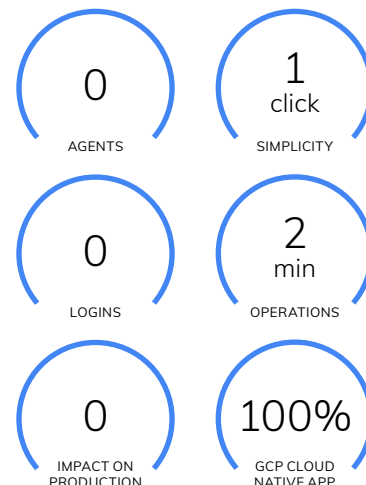

Leverage GCP for production and backup – HYCU leverages the breadth of Google Storage Options to deliver the most cost-effective solution. By automatically provisioning the backup storage in Google buckets and protecting the data, HYCU gives you flexibility. Default storage used is regional buckets. Since Google doesn't charge for data transfers within GCP, customers don't incur any extra network bandwidth charge.

As easy to use as Google Cloud Platform – Don't worry about keeping your backup servers up. With an intuitive dashboard, review the state of your backups from a single console. Like all Google services, HYCU provides an API based approach to integrate backup and recovery workflows. All of the snapshots, buckets and logs are available in the Google Console.

No compromise on security – Safety of your data is critical in the cloud, HYCU is fully integrated with Google Identify and Access Management, so your GCP IAM credentials are used to login to HYCU. You have one place to manage users with self-service capability. HYCU keeps all of the backup data in a secure project, so there is no risk of someone getting access to it.

Google Cloud

- Fully Managed Backup and Recovery as a Service
- Zero deployment and Maintenance
- Zero Agents and Scripts
- 1-Click VM and Application Backup
- Launch and 1-click trial directly from the Google Marketplace
- First and only Google Cloud Platform-native built Backup and Recovery Software
- Fully integrates into Google Identity Access Management (IAM) & works via Google Cloud API
- Billing for backup service fully integrated into Google billing

HYCU Backup as a Service for Google Cloud Platform (GCP)

HYCU for Google Cloud Platform

- Deployment Free
- Config Free
- Agent Free
- Maintenance hassle Free

HYCU for GCP Subscription Model

- Based on Total Source Capacity & Frequency of Backup
- No independent charge for compute or storage
- No network egress charges for customer
- Dedicated HYCU service for every customer

Leverages
Google
Platform
Value

HYCU uses native snapshots - faster and more efficient.

Fully Integrated into GCP IAM:

- easier to manage
- making backups more secure

Backup to Google Cloud Storage Buckets:

- does not require expensive physical drives
- leverages Regional, Nearline, and Coldline buckets

Impact Free
Application
Backup

Powered by GCP Storage Snapshots - so your live environment is not impacted one iota.

Agent-Free: Zero deployment & No management pain. And no, we're not kidding - **it is agent-free.**

Application Consistency - since we're **native to Google Cloud** both our backups and clones are Application Consistent.

Eliminates production load by offloading transfer bandwidth to HYCU. You avoid costly compute costs.

Backup a single file, or recover your full instance.

Fully Managed,
Backup as
a Service for
GCP

Zero Deployment and Maintenance.

Zero Management - we manage it for you.

Zero Upgrades - HYCU upgrades continuously so you are always on the latest version.

HYCU
Simplicity

One-click backup - for a cluster of VMs, or just a single file.

User centric Self-service Restore - our easy to use console allows non-techies to backup effortlessly.

Designed specifically for the GCP Admin - if you oversee the Google Cloud Platform, we make it simple to render backups in seconds.
